SUPPLEMENTAL RESPONSE

Dear Madam:

This paper is submitted in response to a telephone call received from the Examiner on November 25, 2008. The Examiner requested Applicant to clarify several matters related to the "computer readable medium" claims 10 - 13.

Applicant first submits that the term "computer readable medium" used in claims 10 -13" are supported in the specification. The Summary of the Invention recites "A computer implemented method" for performing the method. Applicant submits that computers inherently have storage or memory that is computer readable. The original claims also recited "A computer-readable medium", and hence this term is supported by the original claims. Applicant notes that the original claims form part of the disclosure. Further, the specification states at page 20, lines 18-19 that the method may "be executed by a processor (CPU or DSP) of any type of electronic device . . ." CPUs and DSPs inherently execute instructions from a memory.

Applicant further notes that the term "computer readable medium" used in the present claims is intended to encompass tangible storage media, and is not intended to include signals or transmission media.
